ABOUT US

ATC is a major supplier of aluminium extrusion and sheet, servicing Victoria since 2012. Our core values are to be efficient, progressive and customer focussed. People love to buy from us to experience our great service and good vibes.

The company is owned and managed by founder Stephen Stanford who has over thirty five years experience in the business world as an entrepreneur. He is supported by a well-trained and highly motivated staff, many of whom have been with the company since day one.

TRADE DESK

Our stock service carries over 800 different industry standard extrusions as well as sheet and tread plate in a large range of sizes. Many stocked items are available in powder coat and anodised finish. Extrusion and sheet can be ordered cut to any size required.

WHOLESALE PORTAL

Our wholesale service supplies a range of industries with high quality extrusions at volume pricing.

Sectors supplied:

Cool room

Curtain & Blind

Transport

Caravan

General
Manufacturing

ATC provides a next day delivery service and offers a web portal for the placing of orders. Wholesale customers may purchase from our trade desk stock range and receive the cheapest trade rate.

CUSTOM EXTRUSIONS

ATC supplies custom made extrusions to a wide range of industries including the construction, manufacturing, and automotive industries.

For your custom extrusion shapes, ATC will organise die production and extrusion manufacturing. ATC can also provide finishing services including fabrication, powder coating and anodising. ATC produces in Australia as well as at our partner mill in the UAE.

ATC will choose the most appropriate and cost-effective production method, tailored to the urgency and budgetary requirements of your job.

OFFSHORE PRODUCTION

ATC's partners in the UAE have invested more than \$500M in state of the art equipment for the production and finishing of extrusions.

The entire factory is new, utilising high tech European equipment

The mill has a vertically integrated, custom built facility set inside a 200,000 square metre plant. The extrusion line features fully automated presses with automated log storage and double bench / double pullers 64m in length. The aging ovens are bottom loaded and accurate to 1.5 degrees variation.

The aging and stacking processes are fully automated and extrusions are laser measured against the die spec after every five billet loads.

Finishing includes two fully automated anodising lines and a "Qualicoat" accredited powder coat facility with a capacity of five million square metres per annum.

The fabrication unit incorporates services for crimping, punching, welding, CNC machining and customised cut-to-length profiles.

The mechanical properties of crimped profiles are tested as per BS EN 14024 and comply with international standards.

Logistics are handled inside a fully robotic packing facility to minimise damage and inaccuracy.

2127 – 2131 Dandenong Rd,
Clayton, VIC 3168
